It's easy to erase the end credits added by Filmora by trimming. The real trouble is the huge semitransparent watermark that covers the lower middle of the screen. Applying the universal watermark removing methods like cropping, replacing, and blurring will definitely damage the authenticity and integrity of your video. This also explains the purpose of Filmora adding watermarks to the video - pushing free users to purchase the program. It's possible to crack Filmora X watermark by using some free license keys. However, frequently they won't work due to expired or excessive user issues. Here lies the point why I want to show you how to active Filmora X without the product key - download Filmora X activator. In my experience, this is one of the easiest ways to export Filmora without watermark. In the next screen you can select the Save Settings option and choose the Save location. Select a folder you will remember and hit OK. If you choose to save in the default folder, Filmora will overwrite it. If you want to prevent that, you can save it somewhere else.
